Re: Bermuda Photographs

Dear Kathryn:

Yes, you have permission to use all 5 of these photographs, as you see fit for your research, publications, etc. I'll continue looking for others and will send if I find them.

Thanks for including me in this project.

Rick

Dear Rick,

It was great to talk to you on the phone earlier today. Thank you again for your participation in our project on the Bermuda Principles. We are now sorting through all of the supplementary information and resources that our interviewees have generously provided in addition to their transcripts, and along with documents and handwritten notes, several individuals have also shared photographs of the meetings.

You provided us with 5 photographs from the various Bermuda meetings. We are asking for special permission to use these photographs in our research--i.e., to use them to inform our writing, and potentially even to publish them in scholarly articles and chapters. In the latter instances, we would of course credit you in any footnotes or photo captions. If necessary, would also contact any individuals depicted in the photographs for their permission.

I have attached the images in question to this email and the next. We very much appreciate your providing them to our project. Please let us know your response via email, so that we can archive the conversation for our records.

All best,
Kathryn Maxson
Rachel Ankeny
Robert Cook-Deegan

HUMAN GENOMIC SEQUENCE GENERATED BY LARGE SCALE CENTRES:

RELEASE

- Automatic release of sequence assemblies >1kb (preferably daily)
- Immediate submission of finished annotated sequence

and in the public domain

- Aim to have all sequence freely available for both research and development, in order to maximise its benefit to society.

POLICY

- The funding agencies are urged to foster these policies

EMERGENT SEQUENCE GENERATED BY LARGE SCALE CENTER:

RELEASE

- Automatic release of sequence complete 30's (input delay)
- Immediate submission of finished nucleated sequence

~~SECRET~~

not to the public domain

- Aim to have all sequence fully available for both research and development, in order to maximize its benefit to society.

POLICY

- The funding agencies are urged to justify their policies
