

The Edge, first month

This is a review of the data collection methods in place in the first month of the Edge. The goal was to make sure everything was working properly and uncover areas for improvement in data collection, as well as to get some data for decision-making.

Data

Time spent by non-Edge staff on Edge projects

In total 64 hours of time were spent by non-Edge staff on Edge projects.

- Desktop support, 50 hours (almost entirely Paul, 2 hours for Alton). This was 27% of Paul's total work time for January.
- AUX, 12 hours (almost entirely Joyce, 1.5 hours for Ian)

Workshop feedback

I didn't know this until February -- events are tracked in several different places, including the Library Event database as the Duke Calendar. We do not currently have any access to data about registrants for Duke Events (many of which do not require registration). We therefore have no information on attendance/registration numbers for the majority of events in the Edge. The Duke Events calendar might have Edge events listed under "Bostock 023" "Bostock" or "Bostock Library – The Edge Workshop Room."

- 4 events were entered in the Library Events Database; 9 more were listed on the Duke Events Calendar for a total of 13.
- 4 events turned in evaluation data in January (44% of events)
- There were 32 feedback forms submitted
- 33 total people attended the 4 events listed in the library's Events database
- 20 of 32 (62.5%) respondents said they wanted to be added to a listserv to inform them of events in the edge. This listserv doesn't yet exist

Kiosk usage data

Michael Dahl and Joyce are working together to change how the Google Analytics is tracking kiosk interactions to try and make the data more meaningful for future analysis. Right now the most interesting info is probably the number of hits for the five subpages. For January there was no way to track where the users tap the map.

The intro loop video is housed on the homepage of the kiosk and when you click it, it gets set to display:none so that the page content will then load 'instantly' underneath. There is a custom event tracker with that link [EdgeKiosk/Interactions/Attract] - but when you try to use it with the Behavior Flow diagram everything is in sessions instead of pageviews, so perhaps that's not the best way to have tried to track this. Michael will instead try adding a URL param to the video loop link

February 2015
Joyce Chapman

(something like ?=attract). We will also change the session time - by default it's set to 30 minutes, but we could knock that down to 3 and see if it helps.

The map feature is the most popular subpage from the homepage (clicks within map not tracked during January), followed by room reservations. The help form isn't being used very much.

- 1,606 sessions
- 9,571 pageviews
 - 29% (2,794) iPads (this represents all usage on the ipads by the project room doors)
- If we don't consider iPad data with other data, we had 6,777 pageviews at the front kiosk (81%)
 - 87% (5,912) homepage
 - 3.9% (266) map
 - 3.6% (241) reserve a room
 - 1.5% (101) events
 - 1.1% (74) staff
 - 0.7% (49) help
- 6 pages per session
- Bounce rate: 61%

Digital Studio survey results

We received 3 requests for software or technology that folks would like to see in the digital Studio via this Qualtrics form linked to the desktop of their computers. One was a request for technology in the Edge, not the Digital Studio. This prompted us to consider the need for a generic place to provide Edge feedback. We are piloting a Feedback box at the front Edge desk starting February 16th.

- Exercise (yoga) balls to help stimulate thinking & energy.
- Would be interested to see Mplus included as a statistical software in the lab. Thanks!
- I love the flexibility that having multiple screens offers me when I work with teams in the edge's project rooms, but currently only 1 or 2 of the project rooms have cords in them that allow me to extend my screen onto the TV's. If we could get cords set up in more of the study rooms it would be greatly appreciated! Thanks so much, have a great day!

Desk transactions

295 desk transactions occurred in January at the Edge desk. The Edge desk is staffed 47 hours a week, so there were roughly 1.6 transactions per hour staffed. 79% of all transactions occurred between noon and 4:59pm. According to the information entered in LibAnalytics, transactions were:

- 50% informational
 - 66% room reservations
 - 34% office supplies
 - 0% lockers
 - 0% writeable spaces

February 2015
Joyce Chapman

- 32% directional
- 16% technology
 - 63% were about eprint
 - 16% scanners
 - 11% a/v assistance
 - 8% computers
 - 3% copiers
- 1% research
- 1% ADS

I also went through all the questions and coded them into more granular categories or added tags to those that didn't have them. By doing so I found that:

- 13% of all transactions were "where are the printers?" with an additional 9% of all transactions from folks trying to locate the DVS, DS, workshop room, or the project rooms.
- 11% of queries were people who needed help making room reservations.
- 8% of all transactions were requests to borrow technology (in particular, a number of different phone and computer charging cables were requested)
- 2% of all transactions were about how to find Bostock 023
- 4% of all transactions were for a stapler. When combined, requests to use office items equaled 9% of all queries, including a stapler, staples, tape, pen/pencil, hole punch, tissues, Clorox wipes for tables, and erasers.

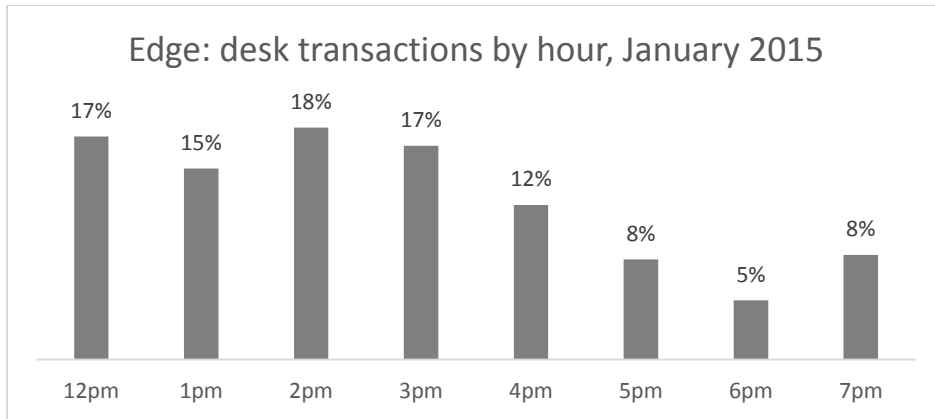

Researcher status

- 68% undergrad
- 17% grad
- 8% faculty

There were 27 Edge-related questions reported at the Perkins desks (23 at the help desk and 4 at the circ desk). There was only 1 Edge related question recorded in LibAnalytics from Data GIS. No one else recorded Edge-related questions in LibAnalytics.

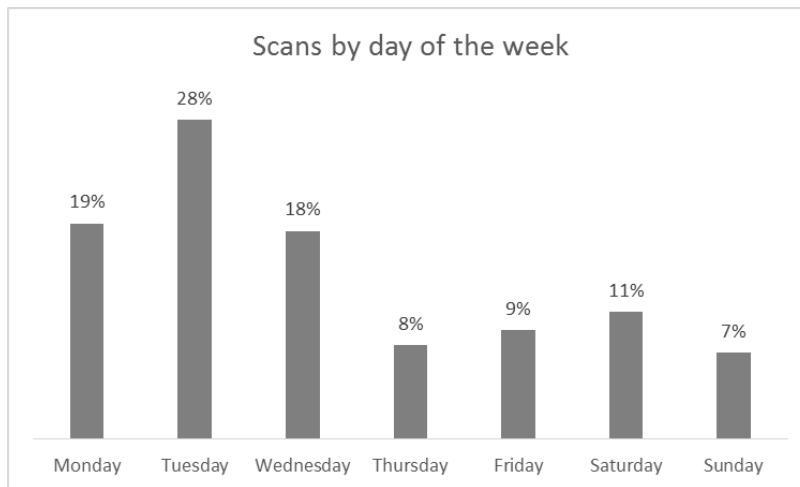

A huge percentage of desk transactions are not having the following information recorded, making it difficult to analyze why types of questions are being asked. I had to code these by hand for January and it took a long time: *Technology question type, informational question type, technology request*

Also, 6% of transactions had weird timestamps ranging from midnight to 3am, and 11am. I didn't count those in calculations by hour of the day.

Scanners

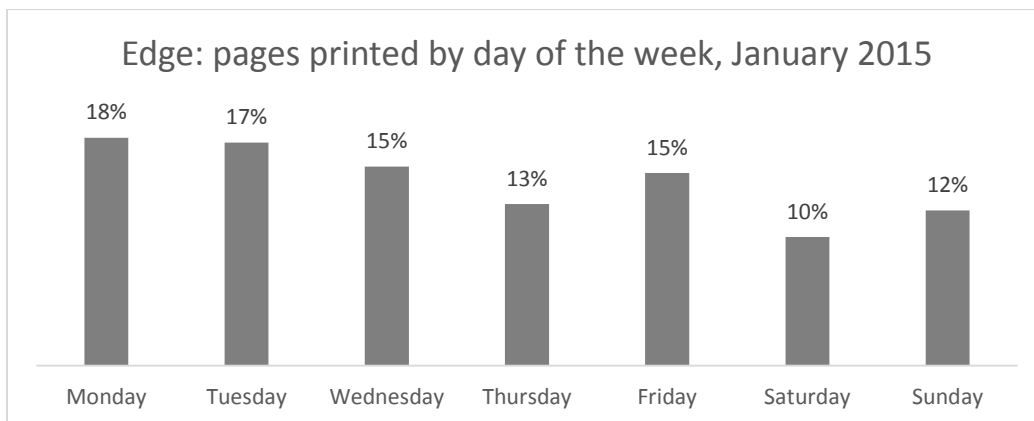

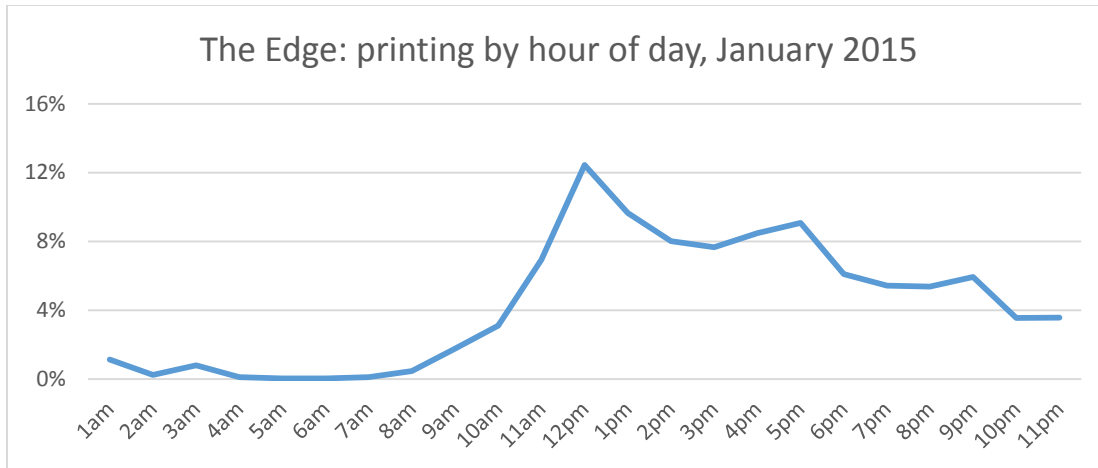

- There were 4,185 total scans on the ScannX machine, and 346 jobs. This is an average of 12 pages per job.
 - 9-10am is the busiest hour for scanning
 - Tuesday is by far the most popular day for scanning. ~65% of all scanning happened Mon-Wed. Saturday had higher scanning rates than either Thurs or Fri (see below)
- *We have no data on scans for the Book2Net scanner, Paul was investigating how to get stats, haven't heard update from him recently.*

Printers

The two printers in the Edge had a total of 66,647 pages printed on them and 6,970 print jobs performed. This is an average of 9.5 pages per job.

- The busiest time of day is the hour of noon. In general, noon to 5:59pm is the busiest time.
- Monday and Tuesday are the busiest days of the week for printing (35% of all printing).

Computers

This is including 11 computers in Lib-GIS (1 of 12 was not correctly hooked up to LabStats during January) and the group called Lib-Bloom. *I don't know where the Lib-Bloom group is, just that Paul told me it was in the Edge. Dorothy said Bloomburg computers weren't hooked in to LabStats, but there is a group called that in LabStats so I don't know what's going on. There are 3 in DS and 3 Macs in DVS; one of these groups may be Lib-Bloom, the other I am not tracking stats for because either I don't know what its called or it's not in LabStats.*

- 710 logins
- I'm not reporting anything more complicated than logins since we aren't even sure LabStats works...

Project Room reservations

Booking slots for the Project Rooms are available in half hour increments. A booking in January averaged 4.2 time slots, or 2 hours. All grabbable/sharable project rooms receive generally the same amount of use as a percentage of all use.

February 2015
Joyce Chapman

Grabbable/sharable

- 889 confirmed bookings
- 3,761 confirmed time slots (of half hour each)
- There were a total of 10,544 slots available in January, meaning 35.7% of the slots available for the month were booked.
- 651 confirmed unique users
- 1,879 total hours the rooms were occupied

Reserved

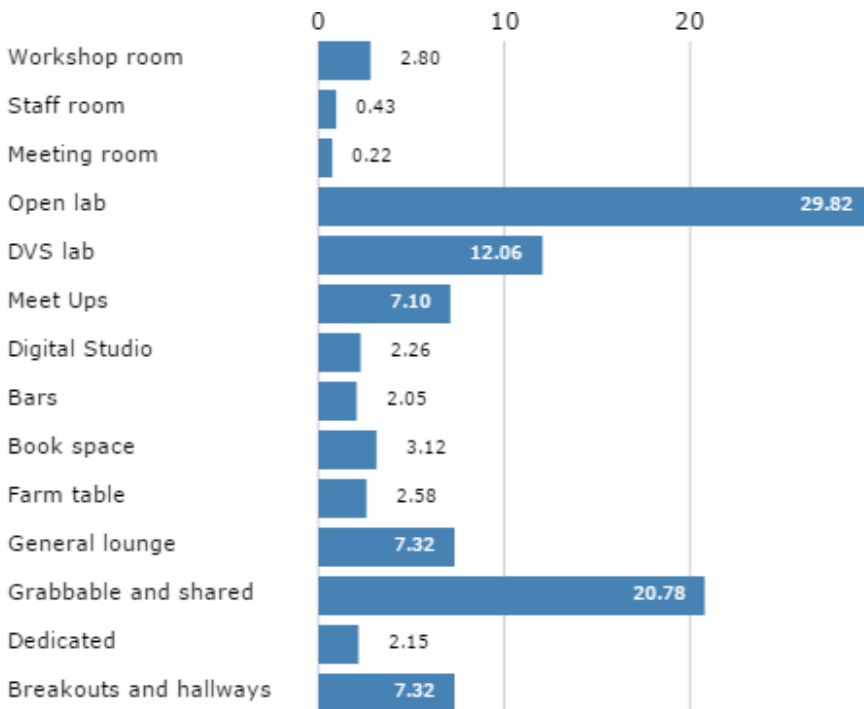

- Project room #3, One Person One Vote, is in use almost constantly from 9am-5pm.
- *Brittany will speak with them about whether they are also using it after hours or on the weekend. We have decided not to use the sampling sheet this semester because they are so visibly there all the time.*

Suma headcounts

Jan 19-23 (Mon-Fri), counts should have occurred at 10am, 12-1pm, 3pm-4pm, and 7pm. Since students were still new to conducting headcounts, however, 25% of headcounts are missing for January's sample week.

- The average number of people counted in each counting session was 69.5.
- The average number of people counted by hour of the day is showing more use in the afternoon than morning or evening. We have no evening data later than 7pm though.
 - 10am: 27 people
 - 1pm: 68 people
 - 4pm: 96.5 people
 - 7pm: 54 people
- The number of people in the Edge seems to be highest between 1pm and 5pm and lowest in the morning. There is no data later than 7pm.
- Note that the Lounge in general had 15% of use (its split into its 4 component sections in the chart below).

Figure 1. Edge space usage by percent

Swipe cards

During the month of January, swipe access was required for all hours until 1/30, when swipe access was only required between the hours of 7pm-8am. However, the DVS door was propped open most of the time, and the staff room was swipe access all the time.

- Digital studio: 440 (80% student, 17% staff, 2% affiliate, 0.45% faculty)
- DVS lab: 1,526 (93% student, 6% staff, 1% affiliate, 0.07% faculty)
- Workshop room: 287
- Staff and consultation room: 454

Event registration system

- According to the data captured in the Event Registration Database, there were only 4 events in the Edge in January: "Fusion Tables: Simple Mapping and Charting," "Reproducible Research Practices," "S-1 Lab / Manifest Data Project," and "Reading an Ancient Text Holistically[...]"
- There were 33 people registered for these four events. 66% were faculty and staff, a quarter were graduate students.
